

# Unlock the Potential of Intermodal Transportation For Bulk Liquid Chemicals

Across the country, chemical manufacturers and their transportation partners face a constant struggle. They are challenged with optimizing supply chains and shipping networks to reduce spend, improve visibility, and deliver accurate, on-time, and cost-effective chemical shipments to their customers.

With Intermodal Transportation from CLX Logistics, you get modernized, transparent, and sustainable transportation networks that offer flexibility and consistency you and your customers can depend on.

## Save Up to 30% Compared to OTR Chemical Shipments

CLX Logistics helps chemical shippers cut costs by up to 30% on bulk liquid chemical deliveries across the United States with a state-of-the-art intermodal transportation network.

## Alleviate Driver Capacity Constraint Issues

Whether drivers are falling ill, a region has been wracked by storms, or any other situation that would cause capacity issues, intermodal eliminates these concerns while keeping costs low.

## Forward Storage Solutions

Remove time constraints from the equation with pre-filled ISO tanks at your destination, ready and waiting to be sent to customers in the region at a moment's notice.

## Reduce Your Overall Carbon Footprint

Significant use of railways dramatically reduces the environmental impact of bulk liquid chemical transportation by a factor of four compared to over-the-road.

## Manage Orders Through a Single Point of Contact

CLX Logistics provides comprehensive bulk liquid chemical logistics and intermodal supply chain macro and micromanagement to ensure you and your customers get the best rates without compromising from coast to coast.

Talk to us today to upgrade your bulk liquid chemical transportation network.

## Harness the Power of a Next-Generation Intermodal Network Today

With a bit of information about the chemicals you're shipping, quantities, and destinations, as well as input on the parts of your network or process that cause the most pain, we can develop an intermodal solution for you. Our solutions are custom-designed to eliminate driver capacity issues, reduce spending, and lower emissions while offering extreme dependability and savings that directly benefit your customers.

## Consistent Quality, Capacity, and Safety at Lower Costs

CLX Logistics provides comprehensive tracking and monitoring from the manufacturing plant to the final consignee, all detailed on a single bill of lading. Our specially-built, lightweight ISO tanks, containers, and chassis are all designed to safely and efficiently transport bulk liquid chemicals throughout North America, including Alaska, Hawaii, and Puerto Rico.

## Environmentally Friendly Transportation

With fuel-efficient locomotives and lightweight ISO tank containers, we leverage modern freight railroad technology to deliver exceptional service at better rates while helping to mitigate the effects of climate change. Sustainability studies show freight railroads in the US can reach an efficiency of more than 470 mpg per ton of freight, making rail a cost-effective and environmentally friendly method of transporting freight over land.<sup>1</sup>
