

A Global TMS For Effective Supply Chain Management

CLX TMS powered by e2open®: Multiple Processes, One System for All Markets

Chemical shippers face more difficulties than ever in their mission to deliver products faster, on time, and at lower costs. To add further complication, capacity constraints and fluctuating fuel prices create significant challenges. CLX Logistics' comprehensive Transportation Management System (TMS) simplifies and optimizes domestic and international logistics for chemical shippers, freight forwarders, carriers, and logistics service providers by providing capabilities based on your specific needs so you can serve your customers better.

CLX TMS powered by E2open provides a single application purpose-built for your business's unique volumes and workflows, covering all modes and regions with full functionality for planning, carrier procurement, execution, tracking, and settlement.

A Chemical TMS for Today & Tomorrow

There was a time when chemical logistics teams could run their transportation networks with a few human resources, a couple of spreadsheets, and a reliable phone line. Eventually, technology providers introduced shippers to automated workflows, rating, tendering, shipment tracking, and carrier payables to streamline logistics processes. It was great to have a technology-based TMS or any TMS back then.

In today's world, where complex supply chains, shifting transportation choices, fluctuating market variables, and demanding customer requirements are the norm, **having just any TMS can be as bad as having no TMS**. Effective logistics management continues to be at the forefront of company operations and digital supply chain transformation, critical to the efficient flow of goods in the global economy. To handle the complexity, companies need to take measures to implement a robust TMS equipped for today and tomorrow.

One Connected TMS for All Your Needs

While chemical shippers, carriers, freight forwarders, and third-party logistics (3PL) providers all move freight, their needs are inherently different. Shippers require reliable service at the best rates from multiple providers to transport the goods they produce. Carriers require optimal utilization and return on assets while supporting many shippers and logistics providers. Forwarders and 3PLs require efficient workflows for connecting multiple shippers and carriers.

Regardless of your organization's requirements, CLX Logistics has you covered with a robust, always-available TMS offering:

- **Carrier coverage across all modes and regions for domestic and international shipments**
- **Optimization tools to reduce costs and meet delivery targets**
- **Direct connections to trade compliance, order management, and warehouse management systems**
- **Specialized capabilities such as fleet management, last-mile delivery, rail tendering, and global parcel shipping**

Increased Profitability for Everyone

Many large companies struggle with distribution challenges and high transportation costs. Transporting chemicals from one point to another requires a safe and carefully coordinated approach, especially since transportation spending is more variable in today's environment. Consequently, a 1% improvement in supply chain efficiencies can significantly improve profit margins. However, managing every shipment stage—over the ocean and the last mile—can be highly complicated, especially during ongoing supply chain disruptions. CLX TMS provides the broadest visibility and carrier coverage across all modes and re-usable connections to shippers, forwarders, 3PLs, and others to help orchestrate simple and complex supply chain scenarios.

Provide the Highest Levels of Service

Chemical suppliers are under constant pressure to deliver their goods safely, more quickly and efficiently, on time, and at lower price points. At the same time, limited capacity and unpredictable fuel costs create strong headwinds. Without visibility into open capacity, comparative rates, and performance history, organizations often incur higher costs per mile, face numerous delivery delays, and settle for less-than-perfect service. CLX TMS answers these concerns with access to the largest carrier network across all modes and regions, plus strong partnerships with digital freight brokerages and a single unified platform so you can select the optimal provider for your shipments.

Pinpoint Your Shipment

Visibility into the status of your shipments provides all stakeholders with reliable, real-time updates for goods on the move. Carrier updates through CLX TMS' global network powered by E2open's e2net provide accurate answers to the question "Where's my stuff?" This capability helps business leaders make optimal decisions in any scenario.

Connected Global Trade, Channel, and Supply Chain Ecosystems

Transportation Management is part of CLX TMS' connected supply chain platform. CLX TMS provides a unique, end-to-end, cloud-based platform architecture, best-of-breed applications, and harmonized, decision-grade data from an expansive multi-tier global network of suppliers, manufacturers, transporters, and fulfillment channels. All this combines as a single source for real-time insight and actionable information across your entire chemical supply chain. The end value is a connected and efficient supply chain moving as one.

Key Benefits of CLX TMS

CLX TMS powered by e2open helps chemical shippers to achieve best-in-class operations in every aspect of their transportation network to deliver significant and rapid ROI with benefits such as:

- > Modernized rating, booking, and tendering with an established network of carriers across all transportation modes
- > Consolidating freight from less-than-truckload to truckload, or for outbound or inbound moves from a distribution center
- > Access to a multi-enterprise network platform with connectivity to global carriers for domestic and international moves
- > Support for shippers' complex, high volume, multi-mode, domestic and international shipping needs
- > Management of the entire logistics operation from front to back, handling multiple languages, currencies, and time zones
- > Automated carrier invoice matching and reconciliation of billing errors prior to payment authorization
- > Global logistics visibility across all modes, service types, and regions for you and your customers
- > Enterprise-class, multi-carrier parcel shipping system that supports complex, high-volume, multi-location, domestic, and international chemical shipping
- > Insight into actionable stats through reporting and dashboards with customizable KPIs
- > Highly-intuitive user interface that accelerates startup time with "near-zero" training

Access to the broadest, global chemical carrier network provides visibility to optimized transportation choices when costs are rising and capacity is tight. You can consider greener options along with cost, delivery, and carrier preferences.

Key Features of CLX TMS

Carrier Management: Plan and execute carrier management strategies with powerful contract management tools and dynamic routing-guide capabilities.

SaaS Solution: Improve speed-to-value through faster updates without upgrade costs.

Seamless Integration: Integrate CLX TMS into one or multiple existing ERP environments.

Global Carrier Network: Plug into an easily accessible global carrier and freight forwarder network.

Network Visibility: Track and control freight via the web and real-time visibility with leading tracking services.

Reporting & Analytics: Develop data-driven strategies to hit KPIs using interactive dashboards.

OTHER PRODUCTS FROM CLX LOGISTICS

Managed Transportation Services: We support chemical companies looking to outsource some or all of their logistics needs to help lower costs, improve service, and fill gaps in expertise with a proven team of chemical industry specialists.

Bulk Intermodal Services: Leverages rail, ocean, and road modes of transport to solve capacity issues, reduce emissions, simplify management, and lower costs.

CLX LaneLogix: An end-to-end freight procurement solution for chemical shippers of all sizes with a complete suite of benchmarking, bidding, and procurement solutions.

CLX Freight Brokerage: Connects our long-term carrier relationships with available capacity to act fast for clients who need to support shipments now.

CLX Gravity: Enables superior transportation managed analytics for global chemical supply chains.

International Services: A global fluency and worldwide presence to ship cargo of any volume with safety, speed, and dependability without sacrificing reasonable rates.

Supply Chain Consulting: Strategic design, tactical optimization, and operational support to optimize routes and save time and money across your network.

About CLX Logistics, LLC

CLX Logistics is the world leader in chemical logistics, driving millions in savings for our customers every year with market-leading intelligence and transportation services. We create economic value through people, process, and technology, deploying a global TMS designed for chemical shippers.
